✉ elvistonyrency@gmail.com

🌐 elvistony.dev

📍 Earley, Reading, UK

A seasoned **Python programmer** with hands on experience with Microsoft Power Platform, Selenium Web Automation, Web scraping and also a certified "Automation Anywhere Advanced RPA Professional". Enjoys programming and often works on open-source solutions over proprietary software. A **mini-solution architect** with adequate knowledge on various platforms such as SQL Server, SharePoint, Power Apps, Power Automate. Keen on learning new technologies and often releases **hobby projects** on Github. Currently looking for opportunities to stretch my brain muscles and solve challenging and fun problems efficiently.

WORK EXPERIENCES

College Lecturer (Digital Skills)

Abingdon & Witney College | 2023 - Present

Lecturer in Digital Skills and IT, and deliver courses in the college and offsite on the topics relating to Digital Skills and Advanced Microsoft Office.

Cost efficient problem solver

EDUCATION

Masters in Artificial Intelligence

Northumbria University | 2023 - 2024

Masters degree in the domain of **Artificial Intelligence** in London, UK (Projected Result: **Distiction**) 8.0/10.0 (based on official calculation of course grades)

Thesis: *IMU Sensor fusion with Wireless Networks for Enhancing user positioning systems.*

Bachelors (with Honours) in Computer Science Engineering

APJ KTU | 2017 - 2021

Bachelors completed with honours and 9.05 Cumulative grade point.

Thesis: *Smart Home Automation with Machine Learning (Built with Python, Flask, Firebase and a Raspberry Pi Dev board)*

PROJECTS

Multi Source Webscraping

Corporate Project

The Automation solution was entirely built on **Python** and has a plug-and-play **framework** where a parent process triggers all individual child processes sequentially and combine their output into a uniform excel spreadsheet. Read more about the project [here](#).

Project Management Tool | Power Platform

Corporate Project

Project was built on the **Power Apps** Platform with certain functionalities implemented using **Power Automate**. Importing, Exporting of data to and from the tool was implemented.

Home Automation (EVA)

Academic Project | [Open Source](#)

An intuitive home automation soluton developed using **Python**. The system was capable of producing consumption trends and understanding simple voice commands. Know more about the project [here](#)

Board-IO - Peer to Peer Drawing Board

Hobby Project | [Open Source](#)

This **peer-to-peer** based drawing board allows you to **draw realtime** with friends and family all over the world and it's **Server-less** and completely free! Check it out [here](#)

Check out my other projects  [\[Click Here\]](#) and my  Github Repository [\[Click Here\]](#)
